ChromaTone[®]

STIMULANT-FREE METABOLIC FORMULA

- ▶ Assists your body's natural ability to convert sugar into energy*
- ▶ Contains chromium to facilitate healthy body metabolism*
- ▶ Supports energy utilization*

P Product Information

Today's fitness trend is perhaps one of the healthiest and most widespread societal transformations of our century. Weight management and strength training are two of the most popular goals of fitness-minded individuals. ChromaTone[®] is a dietary supplement that supports your fitness efforts. Featured ingredients include *Gymnema sylvestre*, papaya, and chromium amino acid chelate.*

Gymnema sylvestre, a secondary ingredient in this formula, has been shown in animal studies to aid in naturally metabolizing fat. In conjunction with a healthy diet and exercise program, this new herb may further aid in your weight-management efforts.*

F Features and Benefits

- ▶ Chromium supports the body's natural ability to convert sugar into energy. When combined with exercise, chromium has positive muscle-tissue building and toning properties.*
- ▶ Gymnema leaf helps the body convert sugar into energy.*
- ▶ Papaya leaf is a digestive aid with enzymes that break down protein, carbohydrates to a digestible state. Papaya also helps the body retain the nutrient value from foods.*

? Frequently Asked Questions

Q. Why is chromium so important to the body's systems?

A. Chromium allows the body to function more efficiently. This allows for better use of stored energy in the body.

Q. Can anyone take this product?

A. ChromaTone is formulated to be used by adults. If you are pregnant, lactating, under a physician's care, taking medication or a diabetic, you should consult your physician before use. Read the product packaging carefully for complete dosage instructions before using this product.

S Science

Chromium chelate is an important nutrient. A U.S. Department of Agriculture study has shown that nine out of 10 Americans get less than the low-end range of chromium recommended by the National Academy of Sciences. Chromium is an essential nutrient required for good health. Chromium helps regulate the metabolism of protein, fats, and carbohydrates.

Important compounds in the bloodstream are responsible for transporting glucose inside cells and maintaining proper glucose and blood lipid (cholesterol) levels in the body. Chromium has been shown to help increase the sensitivity of these compounds. This potentially aids in converting sugar into energy. Using chromium to activate these compounds may actually increase the amount of glucose available for energy production. Chromium is at the heart of a biologically active complex called Glucose Tolerance Factor, or GTF, which is responsible for potentiating (increasing) the action of these compounds in the body. Chromium allows the body to function more efficiently, which allows for better use of stored energy in the body.
